

Scientific Roadmap: The 3-Experiment Arc

V2: Constraint-Driven

- Active selection persists
- BUT hits a hard ceiling
- EPC complexity plateaus at 140-155

Ceiling Confirmed ☐

Null result:
Ceiling persists

V3: Niche Construction

- Secreted fields (S)
- Sham control isolates causal environment feedback
- Real & Sham LZ76 identical (0.068 complexity)

Null Result Verified ☐

Null result:
Secretion
insufficient

V5: Indirect Encoding + Speciation

- CPPN developmental layout
- Speciation niche protection
- 9.9x Node Count Growth
- Behavioural enrichment (d = 2.31 action entropy)

Growth Unlocked ☐
